Thank you for selecting the MyFriends Database from Park Databases (small) to download. Below are the instructions for downloading, loading of database package onto your personal computer and logging onto the database. Further instructions are available from the help pages once successful loading of the software is achieved.

### **Download Instructions**

Using Windows explorer create two new folders on your personal computer C:\MyFriends and C:\MyFriends\CD

Click on the moving CD on the webpage and save the download to C:\MyFriends\CD.

After you have carried out the downloaded to the new folder C:\MyFriends\CD there should be the file CDMyFriends.exe in the folder you created. This is a self extracting zip file. Double click on this file. The files making up the MyFriends Database, associated help file and the run-time MSAccess97 application will be extracted.

### **Loading database onto your personal computer**

With your computer running and displaying windows, click on the Start button and select Run from the menu. In the Open text box type C:\MyFriends\CD\Setup.exe and click on OK. The MyFriends Database Set-up program will run. A welcome message will be displayed and the user will be advised to close down any applications that may be running. The user will then be informed that the Set-up program will install the MyFriends Database in the folder C:\MyFriends. This may be changed but it is strongly recommended not to do so. The set-up program now invites the user to install the software. Click on the Install button.

The Myfriends Database will now load. Follow the instructions on the screen. In some cases not all the files from the self extracting zip file will be loaded. This will depend on the windows operating system in use and whether MSAccess97 is present on your personal computer. If a windows file can not be opened then click on ignore and continue with loading process

### **Logging onto the database.**

After installing the MyFriends Database software onto your personal computer, you are now ready to logon. Click on the Windows Start button. Move the mouse to Programs, MyFriends Database and then click on the Database icon. The database will load and an input box is displayed. The Software Registration Reference must now be entered into the text field. This reference can be found on the bottom of this page. If the correct reference is entered then the database will load displaying the Main Menu screen.

Any further enquiries concerning database packages should be made by using the e-mail [enquiries@park-databases.co.uk](mailto:enquiries@park-databases.co.uk).
